ePayments - An Overview

Jackrabbit's ePayments allow you to process your customers' credit cards or bank account drafts from within your database. For you and your customers, the process is seamless, and the best part is Jackrabbit doesn't charge any extra fees to process ePayments!

In order to process ePayments in Jackrabbit, you must have both a gateway account and a merchant processing account with one of our ePayments Partners. We have partnered with two providers and have written code for both to offer you a choice for your online payments solution in Jackrabbit.

In addition to the video information above, we have created a document to walk you through all the steps required to process your payments. **Download the Guide to Total ePay PDF**.

There are no additional Jackrabbit fees for processing ePayments, however, there are fees associated with the gateway and merchant processing accounts. Our ePayment Partners offer meet or beat pricing guarantees!

Use the **ePayments Wizard** to get started with this time-saving feature. If you have any questions about ePay, **schedule a call** with an ePayment specialist today!
