

# Customize Scroll Bars and Colors in Your Class Listings Tables

Last Modified on 11/03/2020 12:30 am EST

If you are familiar with using

rules, there are a few you can apply to your scripted tables. Two examples are shown below. Contact a webmaster for help with

rules; these are only meant to show some basic possibilities. Webmasters: you may use CSS to specify styles for the table which is used for the html tags DIV, SPAN, TABLE, TR, TD, etc.

## Mini Scrollable Table:

If you are pressed for room for the table, you can encase the table code within a div that forces the table into a specific size with scroll bars. This example filters to Cat1=Bunny, hides the Description and Openings columns, and places the table inside a defined-size scroll of 300x300 pixels.

Hover mouse over image below to view the resulting table (static image)

## Background color of table, and font style:

If you want to specify a color for the complete table background you can use a div style with the html color name or hex number. In this example, we are using color #D8BFD8.

Invalid Request: Unable to display openings. Please contact site administrator.

Hover mouse over image below to view the resulting table

Item	Item	Item	Item	Item	Item	Item	Item	Item	Item
1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

For a complete list of special effects parameters, view the [Tricks](#) page. Any special effects not listed there are not available via Jackrabbit and would require the coding skill of a webmaster to further manipulate the table displays.
