

What is a Jackrabbit User ID?

Last Modified on 11/03/2020 12:31 am EST

A Jackrabbit User ID and password are the keys to your database; these credentials give a User the ability to log into your database. Each enrollment, drop, and transaction entered by a User will have their *User ID* associated with it.

★ A Jackrabbit database can maintain as many *User IDs* as needed. There is no limit to the number of Users that can be logged into the database at the same time (unlimited concurrent Users).

★ Users can be limited as to what they can see and what they can do in Jackrabbit using **User Permissions**.

Example: You want your managers to have access to revenue reports, but would like to restrict those areas for all other Jackrabbit Users. This is done by removing the permissions relating to financial reports from all Users except management.

User IDs are managed from *Manage Users & Permissions*, under the *Tools* menu.

The screenshot shows the Jackrabbit application interface. At the top, there is a navigation bar with links: FAMILIES, STUDENTS, CLASSES, EVENTS, STAFF, TRANSACTIONS, STORE, REPORTS, STAFF PORTAL, and TOOLS. The TOOLS menu is highlighted, and a dropdown menu is visible with options: My Account, Setup Guide, Change Password, Edit Settings, Credit Cards/Bank Accounts Settings, Costume Management, Edit Email Templates, **Manage Users & Permissions** (highlighted with a yellow box), and Search User Activity. Below the navigation bar, the 'Edit Settings' page is displayed. On the left, there is a sidebar with links: CLOSED DATES, DASHBOARD ANNOUNCEMENTS, DROP-DOWN LISTS, LOCATIONS, MY ACCOUNT, NOTIFICATIONS, ORGANIZATION DEFAULTS, and ORGANIZATION LOGO. The main content area is titled 'Manage Users' and contains a table of users. The table has columns: UserID, First Name, Last Name, Email, Role(s), and Ph. The table lists four users: 1. camillejohns, 2. dlharris, 3. evasargeant, and 4. stephandrews. The user 'stephandrews' is highlighted with a yellow box and a mouse cursor. Below the table, there is a 'Restrictions' column with a search bar and a 'Normal' restriction level.

A Jackrabbit User ID must be unique throughout Jackrabbit's entire application.

Example

- You have an employee named Dianne Smith who would like her User ID to be "dsmith".
- When you are adding her User ID to your database you receive an error message *User ID not available*.
- You do not have any User ID "dsmith" in your database.

Why is this User ID not available?

A studio down the street, who also uses Jackrabbit, has an employee named Deirdre Smith and her User ID is "dsmith". Deirdre has already taken the User ID "dsmith" and there can only be one in the 'Jackrabbit World'.
