Time Zone & Date Settings

Last Modified on 12/29/2020 2:53 am EST

Time and Date Settings are very important and should not be skipped during your Getting Started set up.

- 1. Point to Tools and click Edit Settings.
- 2. On the main page (Organization Defaults) scroll down to the Time Date Settings section.
- 3. Jackrabbit uses the US standard date format of mm/dd/yyyy throughout the database and it is not possible at this time to use another format inside the database. You can, however, choose dd/mm/yyyy for external (customer) views such as on the Web Registration form: student birthdate or on customer statements.
- 4. Verify your **Time Zone** to ensure that all financial transactions and enrollment records use your area's correct date and time.
 - Note: Jackrabbit defaults to Eastern Time US/Canada if this setting is not changed.
- 5. If you observe daylight savings time, verify the dates and update them if needed.
- 6. Click **Save Changes** on the upper left of the page.
