

# Additional Discounts

Last Modified on 11/03/2020 12:32 am EST

You may offer discounts that are in addition to any discounts you offer to families with **multiple children** taking classes or for students who take **multiple classes**.

When you post tuition fees using Post Tuition Fees (*Transactions* menu), you can define this extra discount using the **Additional Discount** settings. The discount can be either a dollar amount or a percentage.

- If the Additional Discount is a dollar amount, it will be applied after all other discounts have been calculated and deducted from the base tuition amount (the tuition fee before discounting and prorating).
- If the Additional Discount is a percentage and you prorate tuition, you will be given an option as to how to apply the percentage.

The *Discount Label* entered will be included in the Notes of the transaction when tuition fees are posted.

## How the Additional Discount is Calculated

### Example:

- Student is taking two classes, each with a base tuition fee of \$50, for a total base tuition of \$100.
- The classes have a Discount Rule that gives a multi-class discount of \$5 off the second class.
- An Additional Discount is being offered for Summer classes.
- There is a closed date in the billing cycle (for **prorating**) that falls on the day of the two classes.
- The student's tuition (before the Additional Discount or prorating) is \$95 (\$50 + \$50 - \$5).

### Additional Discount - \$ (Dollars)

For this example the Additional Discount is \$10.

**Additional Discount** ?

What type of discount is this? ☒ \$ (Dollars)  
☐ % (Percent)

Discount amount

Discount label

The final tuition for the above example is \$85 (\$95 - \$10).

*Jackrabbit applies the Additional Discount after all other discounts have been calculated and deducted from the base tuition amount.*

## Additional Discount is % (Percent) and you DON'T use Prorating

For this example the Additional Discount is 10%.

**Additional Discount ?**

What type of discount is this? ☐ \$ (Dollars)  
☒ % (Percent)

Discount amount

Discount label

Jackrabbit applies the Additional Discount after all other discounts have been calculated and deducted from the base tuition amount.

**The final tuition for the above example is \$85.50** ( $\$95 - (\$95 \times 10\%)$ ).

## Additional Discount is % (Percent) and you DO use Prorating

For this example the Additional Discount is 10%.

**Additional Discount ?**

What type of discount is this? ☐ \$ (Dollars)  
☒ % (Percent)

Discount amount

How do you want to apply the additional discount? ☐ After all other discounts have been applied  
☒ After all other discounts and prorating have been applied

Discount label

You can choose to apply the Additional Discount:

- *After all other discounts have been applied* Jackrabbit will calculate the % discount after all other discounts have been calculated and deducted from the base tuition amount but before prorating has been calculated.

**The final tuition for the above example is \$60.50** ( $\$95 - (\$95 - 10\%) = 85.50$  less \$25 prorating)

- *After all other discounts and prorating have been applied* Jackrabbit will calculate the % discount after all other discounts and any applicable prorating have been applied.

**The final tuition for the above example is \$63** ( $\$95$  less \$25 prorating = \$70 -  $(\$70 \times 10\%)$ )
