Post Multiple Payments at Once with Process Credit Cards/Bank Accounts (Batch ePayments)

If your organization is set up to use Jackrabbit's ePayment functionality, processing multiple customer credit cards and/or bank drafts (e-checks) is handled using *Transactions (menu) > Process ePayments.*

Processing multiple credit cards is referred to as *batch processing.* For instructions on processing a single credit card see **Process a Single Credit Card**, or on processing a single bank draft, see **Process a Single Bank Account Draft**.

 *If you allow for multiple cards on file per family, the **Primary Card** is always used when processing cards via Transactions (menu) > Process ePayments.*
