Both *Item Price* and *Item Cost* are the current amounts and are displayed for informational purposes only. This report does not calculate an average of the actual cost and price of the items that were sold. The actual price and cost of each transaction are used to determine *Net Sales* and *Cost*.

Net Sales

Each transaction's item price multiplied by quantity sold less total discounts (using the item price as of the date of each transaction).

Cost

Each transaction's item cost multiplied by quantity (using the item cost as of the date of each transaction).

Profit

Net Sales less Cost.
