

Security in Jackrabbit

Last Modified on 11/03/2020 12:34 am EST

You and your customers require and deserve a secure environment to protect your information. Jackrabbit is committed to protecting the privacy and confidentiality of your data.

Data Encryption

Jackrabbit is committed to data security with respect to information collected and maintained on our site(s). To help protect confidential information, we support the ability to encrypt all data. Encryption is the process where software is used to scramble confidential information in transit to and from Jackrabbit.

Through Jackrabbit, you are asking your customers for sensitive information such as usernames, passwords, credit card numbers, etc. Our SSL Certificate (GoDaddy) uses advanced encryption to prevent potential hackers from accessing this data.

Jackrabbit utilizes a TLS 1.2 security protocol and meets the latest PCI compliance standards effective June 30, 2018. This protocol is an industry standard designed to protect the privacy of information communicated over the Internet.
